Formulation for
Observed and Computed Values of
Deep Space Network Data Types
for Navigation
(JPL Publication 00-7)

October 2000

The research described in this publication was carried out at the
Jet Propulsion Laboratory, California Institute of Technology,
under a contract with the National Aeronautics and Space Administration.

Reference herein to any specific commercial product, process, or service by trade name,
trademark, manufacturer, or otherwise, does not constitute or imply its endorsement by the
United States Government or the Jet Propulsion Laboratory, California Institute of Technology.
# Table of Contents

[Note: Each section has a detailed table of contents.]

**Foreword**............................................................................................................................... vii  
**Preface** ........................................................................................................................................ ix  
**Acknowledgments** ................................................................................................................... x  

1. Introduction .................................................................................................................. 1–1  
2. Time Scales and Time Differences ................................................................................. 2–1  
4. Spacecraft Ephemeris and Partialis File ........................................................................ 4–1  
5. Geocentric Space-Fixed Position, Velocity, and Acceleration Vectors of Tracking Station ...................................................................................................................... 5–1  
6. Space-Fixed Position, Velocity, and Acceleration Vectors of a Landed Spacecraft Relative to Center of Mass of Planet, Planetary System, or the Moon ................................. 6–1  
7. Algorithms for Computing ET–TAI .................................................................................. 7–1  
8. Light-Time Solution ......................................................................................................... 8–1  
9. Angles ................................................................................................................................. 9–1  
10. Media and Antenna Corrections .................................................................................... 10–1  
11. Calculation of Precision Light Times and Quasar Delays ............................................. 11–1  
12. Partial Derivatives of Precision Light Times and Quasar Delays ................................. 12–1  
13. Observables .................................................................................................................... 13–1  
14. References .................................................................................................................... 14–1  
15. Acronyms ....................................................................................................................... 15–1
